프로젝트 소개

Flutter Moun

The screenshot shows the GitHub repository for Flutter. At the top, the repository name is "flutter / flutter". On the right, there are buttons for "Watch" (2.9k), "Unstar" (96.4k), and "Fork" (13.4k). Below this, there are navigation links for "Code", "Issues" (5k+), "Pull requests" (153), "Actions", "Projects" (121), "Wiki", "Security", and "Insights".

The main content area shows the "master" branch with 58 branches and 363 tags. There are buttons for "Go to file", "Add file", and "Code". Below this is a list of commits:

| Commit | Message | Time |
|---|--|---------------|

| ... | dont require diffs to have a percentage coverage greater than t... | 13 months ago |
| ... | Add pre-stable support for create on Windows (#51895) | 4 months ago |

On the right side, there is an "About" section with the text: "Flutter makes it easy and fast to build beautiful apps for mobile and beyond." Below this is a link to "flutter.dev" and tags for "mobile", "android", "ios", "material-design", and "dart". There is also a "Readme" button and a "BSD-3-Clause License" link.

At the bottom, there is a "Releases" section.

Access hardware buttons (like the volume buttons) from Flutter

Asked 1 year, 3 months ago · Active 9 months ago · Viewed 1k times

1 I am building an app that would act as a remote for presentations. I would like to use the volume buttons to trigger some sort of event. Can I capture hardware button clicks in flutter?

android dart flutter

1 New plugin called [Hardware Buttons](#) was released, which supports detecting volume button events.

1 You may have a go with that!

Thanks

Use on background service #40

dgalizzi opened this issue on Nov 25, 2019 · 2 comments

permissions.

2. We designed this plugin to work only when the app is in foreground (i.e. the activity is visible). As soon as the app goes background, we stop detecting hardware buttons. We adopted this policy because hardware button is kind of sensitive, and it looked reasonable that apps shouldn't keep listening to them if not visible.

We may have to guard ourselves for that crash, though.

Thanks!

dgalizzi commented on Nov 25, 2019

Author 🗨️

Hi,

so headless plugin runs a background service, and you were trying to access hardware buttons in that service while there was no activity. Is that right?

That's exactly it. I want to run some code when volume buttons are pressed but the application on the background. Like some music apps allow you to go to the next song on the playlist by pressing the volume buttons while the phone is locked.

Thanks for your answer, I understand the issue.

```
1272 +   if (!mounted)
1273 +     return Future<void>.value();
1274 +   _warpUnderwayCount -= 1;
1275 +   return;
```

 chunhtai on May 21 Contributor

Suggested change ⓘ

```
-   return;
+   return Future<void>.value();
```

 giantsol on May 21 Author Contributor

Oh, I thought doing `return;` and `return Future<void>.value();` was just the same thing. Sorry, will change this too.

 chunhtai on May 21 Contributor

yes, they are the same, but we might want to be consistent with other short circuit in this method

 giantsol on May 21 Author Contributor

Nice, thank you

Also, the analyzer is unhappy with this: https://github.com/flutter/flutter/pull/61948/checks?check_run_id=893900731

Can you please fix that? Thanks.

 Piinks 2 days ago Contributor

Optional suggestion: This will make the sample an interactive dartpad, which means you can resize the window and actually see this in action! :)
